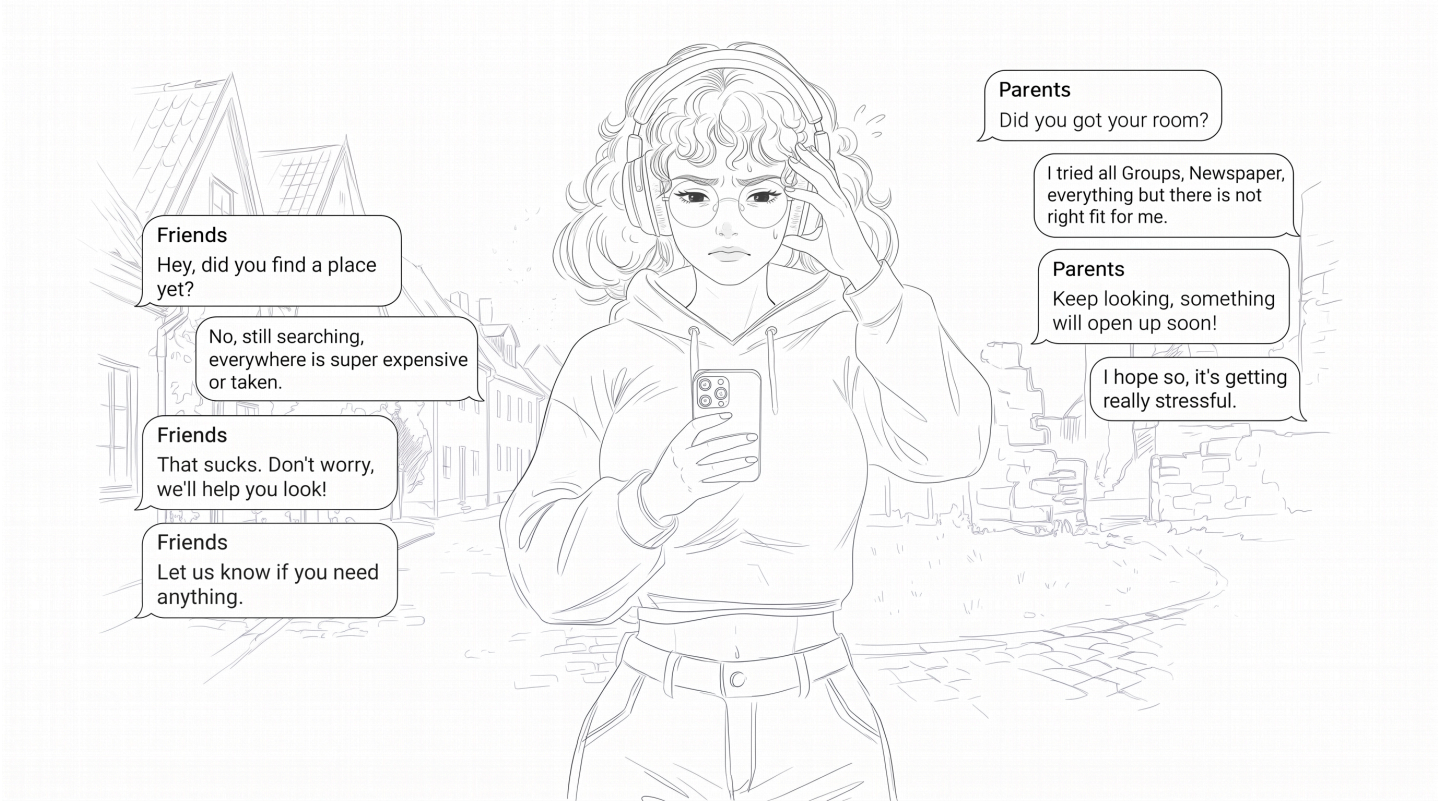
PROJECT DEVELOPMENT PROPOSAL

Ett tak
Visby student housing

Bringing students and the right homes together.

A smart student housing and matching platform, built completely from scratch. Next.js, Node.js, PostgreSQL and OpenRouter. About 7 to 8 weeks. AED 20,500. One platform. Three user groups.



CLICK CATALYST

PREPARED FOR

ETT TAK

Ett tak · Visby student housing

PREPARED BY

Click Catalyst

Product, design & engineering

WEBSITE

clickcatalyst.me

Project brief.

Ett tak means “one roof.” It connects students in Visby with a home that fits, and gives providers and administrators one place to manage it.

THE PITCH

A better way to find student accommodation.

Students weigh price, place, dates and who they might live with. Providers need a clearer way to publish homes and answer requests. Click Catalyst builds the whole platform from scratch for Click Catalyst.

01 · STUDENTS

Find a home that fits

Create a profile, see matches, meet flatmates and manage the booking.

02 · PROVIDERS

Publish and answer

Municipal companies and private landlords publish homes, manage rooms and review requests.

03 · ADMINISTRATORS

Keep the platform trusted

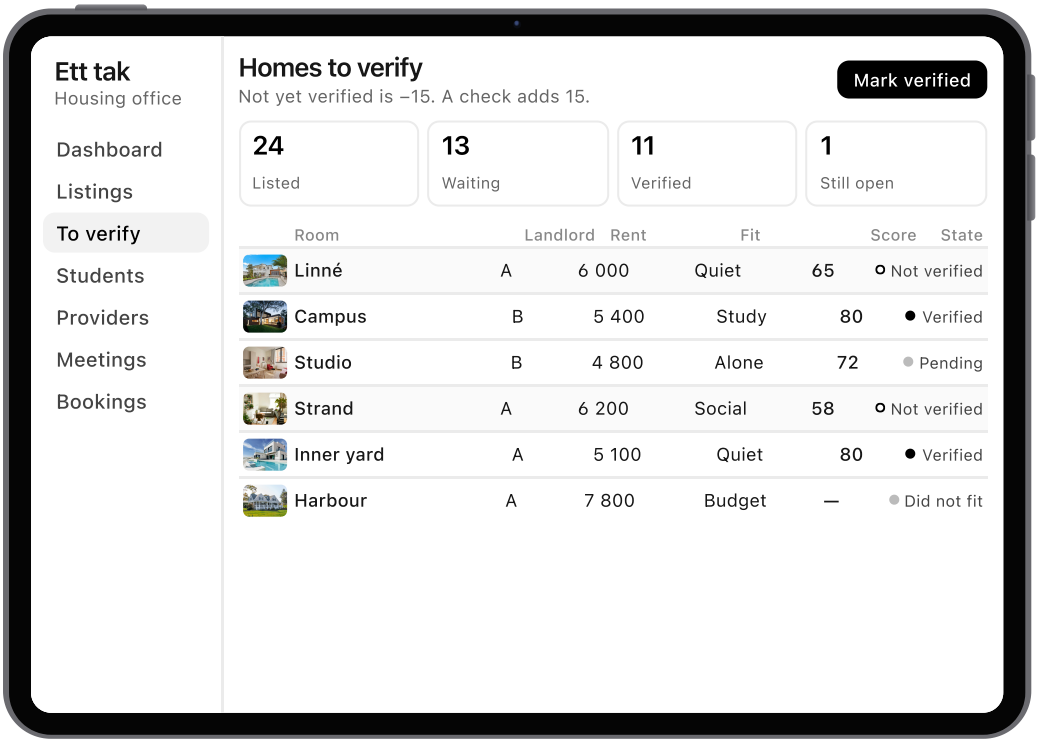
Review people, approve providers, verify listings and watch platform activity.

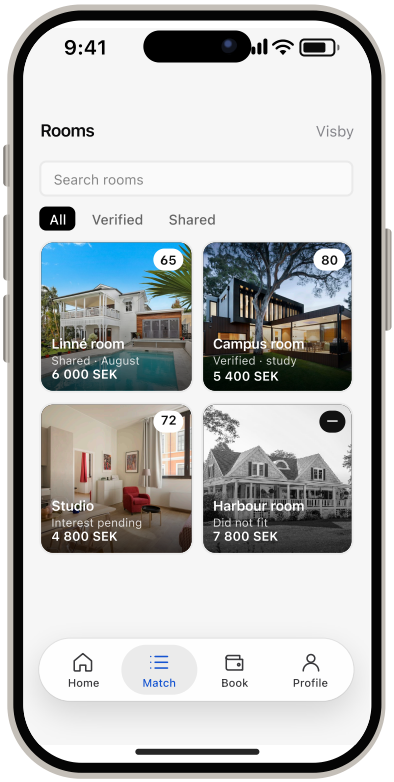
WHAT WE BUILD

- **The public website,** the student application and the provider dashboard.
- **The admin panel,** the database and the AI listing draft.
- **One connected web application,** built from scratch.
- **The whole housing journey,** from profile to check-in, in one place.

THE AIM

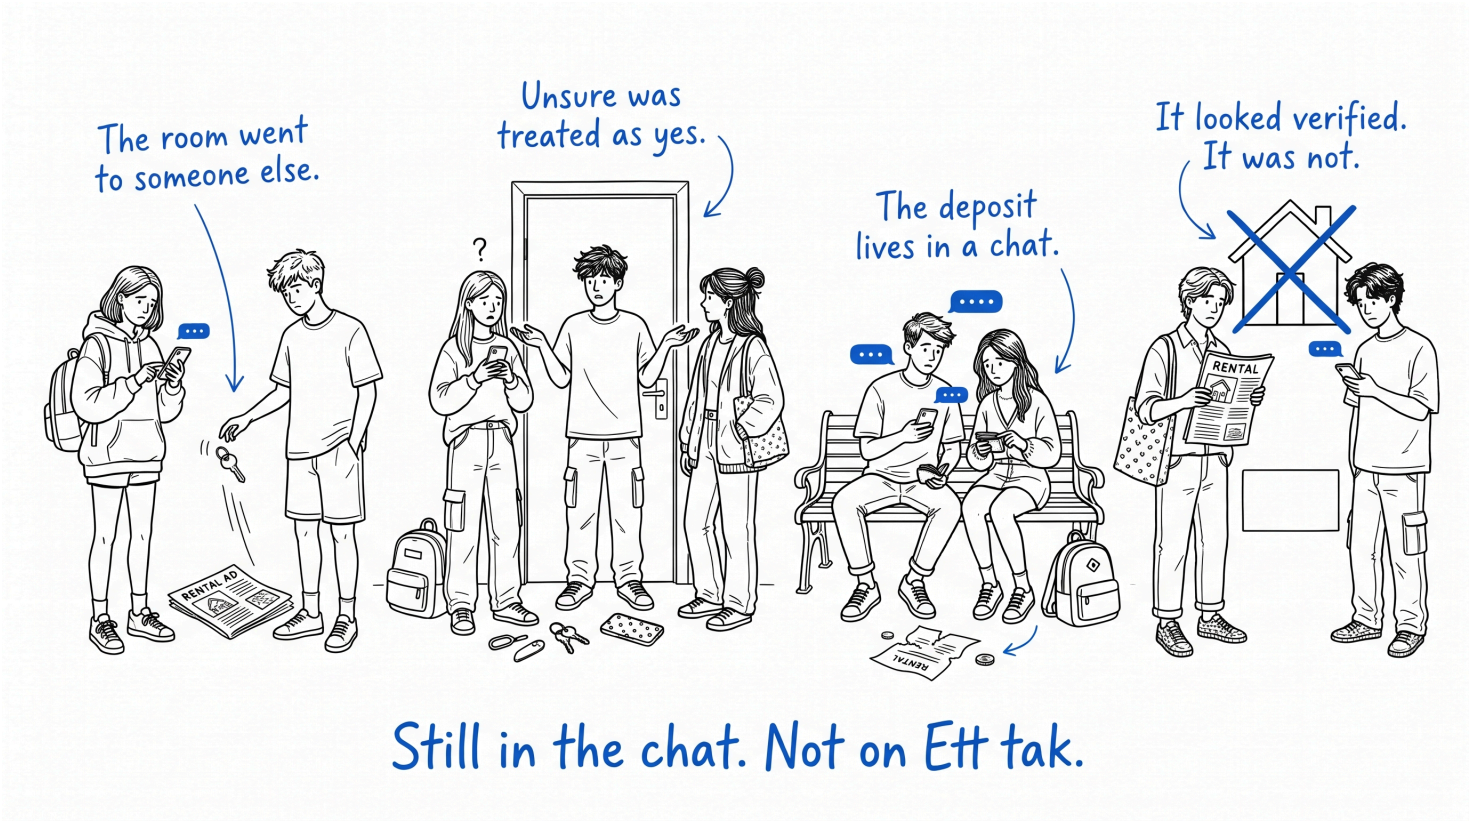
- **Simple for students** who need a home before term.
- **Organized for providers** who publish and choose tenants.
- **Transparent for everyone,** with the reason for a match written down.
- **Swedish and English.** The translation is generated with AI.





What's the problem?

Finding a home shouldn't be this difficult. Listings, messages and decisions are spread across chats, websites and personal contacts.



Discovery, matching, provider work and booking are still separate, and trust is hard to see.

scattered and manual

01 · SEARCH

Scattered information

Students compare price, place and facilities across many channels. Nothing recommends a home for their budget and dates.

- Many places to look
- No personal match
- Hard to compare

02 · PROCESS

Unclear next steps

Interest, approval and confirmation still happen in separate conversations. Shared homes hide who a student might live with.

- Manual back and forth
- Flatmate fit is late
- No shared record

03 · PROVIDERS

Too much manual work

Listings, requests, availability and student messages create extra administration for housing providers.

- Listings by hand
- Requests in inboxes
- Availability is unclear

04 · TRUST

Hard to know what is real

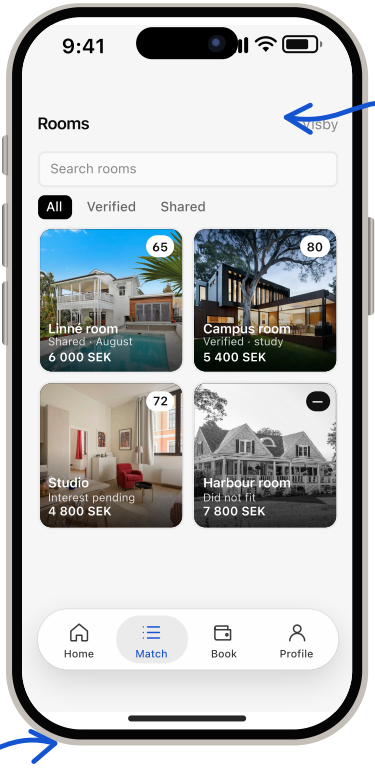
Students need to see that a property is genuine, the provider is approved, and reviews come from people who actually lived there.

- Unverified listings
- Unknown providers
- Reviews from anyone

What's the solution?

One platform. A complete housing journey. Students and providers stop searching and managing this in separate places.

homes that fit



score out of 100

over budget stays out

ETT TAK

One platform. A complete housing journey.

A student creates a profile. Providers publish homes. The match recommends what fits. Interest, approval, a flatmate meeting when needed, then the booking.

- **Create a profile,** then providers publish the homes that are open.
- **The match recommends** suitable homes, with the reason written down.
- **The student asks.** The provider accepts or declines. A shared home can include a meeting.
- **Eligible students book.** After check-in, they can review the home.

↳ one connected process

01 · PUBLIC WEBSITE

Introduce Ett tak

A welcoming site that explains the service and lets students and providers register.

- How the service works
- Registration for both sides
- Swedish and English

02 · STUDENT PLATFORM

Discover, match and book

Ranked homes, interest, flatmate meetings and bookings, in one student application.

- A score, with the reason
- Ask, then wait for a yes
- Book only when the rules pass

03 · PROVIDER AND ADMIN

Manage and keep control

Providers run their homes and requests. Administrators keep listings and access in order.

- Publish and answer
- Verify a property
- Approve a provider

What's included?

Three deliverables, built from scratch. A landing website, a housing marketplace, and an admin ERP. Swedish and English. The translation is generated with AI.

01 · DELIVERABLE

Landing page website

The public site: how Ett tak works, campus and Visby, stories, a path for providers, and registration. Swedish and English, generated with AI.

02 · DELIVERABLE

Housing marketplace web app

Student and provider dashboards. Discover homes, publish listings, ask, meet and book. Each role sees only its own side.

03 · DELIVERABLE

Admin ERP web app

The housing office verifies properties, reviews students and providers, and approves organizations. Not a finance system.

WEBSITE AND ACCOUNTS

- **Landing website**
  Nine sections, from the hero to registration. Swedish and English, generated with AI.
- **Student registration**
  Name, email, password, programme and arrival date. Email confirmation before access.
- **Provider registration**
  Name, email, password and organization. The account waits until an administrator approves it.
- **Sign in and reset**
  Secure login, forgot password, password reset, profile edits and sign out.
- **Student dashboard**
  Profile progress, matches, open homes, pending requests, meetings, the booking and the deposit state.
- **Discover homes**
  Photos, description, city, rent with bills, type, open rooms, dates, distance, verification and resident stars.
- **Filter and sort**
  City, type, maximum rent and verified only. Sort by price, campus distance or resident rating.
- **Must fit, then score**
  City, an open room, rent, dates and type. Then a score out of 100, with the reason, and a note when a home is excluded.
- **Flatmate fit**
  Starts at 50, rises on shared tags, drops 25 for each clash, and stays between 0 and 100.
- **Interest**
  An optional message. The provider accepts or declines. Booking waits while a request is pending or declined.
- **Meetings**
  One to four topics. Yes, unsure or no. A shared home books only when the required yes answers are in.
- **Booking and deposit**
  One month of rent, recorded as held, released at check-in, or refunded if cancelled. No money moves.
- **Reviews**
  One to five stars and a comment, only after check-in. The average feeds the match score.

PROVIDER, ADMIN AND BUILD

- **Provider dashboard**
  Published homes, open rooms, pending and accepted requests, bookings and verification.
- **Property management**
  Title, description, images, city, type, rent, bills, rooms, size, dates, distance and facilities. New listings start unverified.
- **AI description**
  Generate with AI, about 60 to 110 words, from the provider's facts only. They edit it and approve it before it is published.
- **Accept or decline**
  The provider reviews the student and answers. Unapproved providers cannot use provider tools.
- **Admin dashboard**
  Properties, students, providers and approvals. Verification is checked on the server, not only hidden in the screen.
- **Verify a property**
  Approve a listing as verified, or remove that mark. The match score reflects the decision.
- **Students and providers**
  Read profiles, programmes, dates, budgets and preferences. See each provider's homes, open requests and rating.
- **Approve providers**
  New organizations wait. An administrator approves or rejects them before they can operate.
- **AI translation**
  Swedish and English copy is generated with AI. The client does not supply a translation.
- **Each role, its own side**
  Students, providers and the office do not see the same pages. A new provider waits until the office approves them.
- **Demo environment**
  One administrator, two providers, five students, sample homes, requests, meetings and bookings, kept off the live site.
- **Testing**
  Registration, approval, listings, filters, scores, interest, meetings, booking, deposit states, check-in, reviews, the draft and roles.
- **Handover**
  The first deployment, the source code and the technical notes. Responsive in a desktop, tablet and mobile browser.

Score and draft.

Smart matching, and better property descriptions. A home has to fit, then it scores out of 100. The draft is a separate paragraph from the provider's facts.

OUT OF 100

40	25	15	10	10
PRICE	DISTANCE	CHECKED	RATING	FIT

These weights are the rule. Price is against the budget. Distance is to campus. Verification is the administrator's mark. Rating is stars from residents. Fit is how the flatmates match. The student sees the total and the reason for each part. Nobody can pay to rank higher.

↳ an example can land at 85

01 · MUST FIT

A miss stays out

If a home misses one of these, it stays under "Homes that did not fit," with the reason written down.

- **Same city.** A home in another city does not appear.
- **A room is still open.** Zero rooms means it is out.
- **Rent is inside the budget.** Above the budget, it sits with the ones that did not fit.
- **The dates cover the stay.** Free by arrival, and the lease lasts until the student leaves.
- **The type matches.** A shared flat shows only when the student wants to share.

↳ a miss stays out

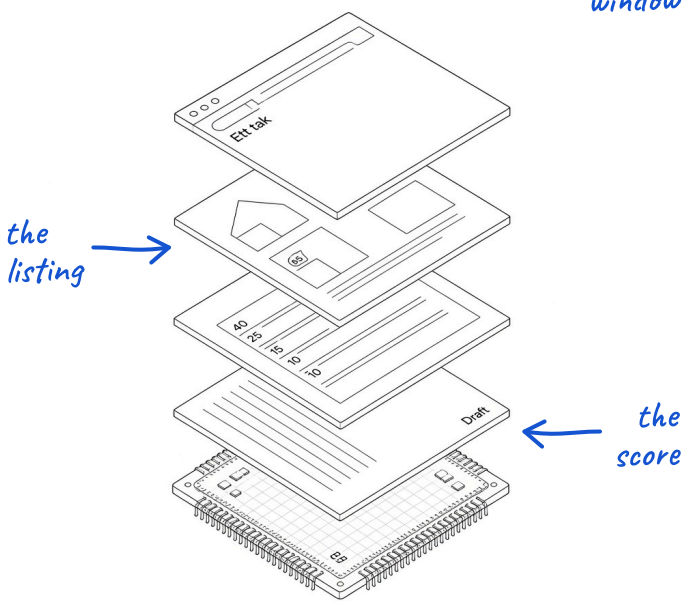
02 · ON THE CARD

An example, 85 out of 100

- **35/40** for price. **20/25** for campus distance.
- **15/15** for verification. **8/10** for resident rating.
- **7/10** for flatmate fit. The total is 85.
- **An illustration.** Real scores use the approved rules and the real listing.

↳ the draft is not the score

five layers



03 · THE DRAFT

Generate with AI.

- **The provider enters the facts,** then clicks Generate with AI.
- **The provider edits it** and approves it. Nothing is published until they say so.
- **OpenRouter writes one paragraph,** about 60 to 110 words, and nothing that was not entered.
- **It will not invent a facility.** The provider owns the final words. The call stays on the server.

↳ facts only

Payment flow.

A clear booking process. The deposit is recorded as one month's rent. Held, then released or refunded. This version does not move money.

01 · INTEREST

Express interest

The student picks a home and sends a request, with a message if they want one.

- **Pending blocks booking.**
- **A decline blocks it too.**

↳ *still waiting*

02 · APPROVAL

The provider answers

The provider reviews the request and accepts or declines it.

- **A shared home** still needs the meeting step.
- **Yes, unsure or no.** Unsure is not yes.

↳ *no yes, no booking*

03 · CONFIRM

Then the deposit is held

When the conditions pass, the student confirms. The record shows one month's rent as held.

- **Held is a record,** not a payment.
- **No gateway,** and no escrow, in this version.

↳ *held, not paid*

04 · THE RECORD

Released, or refunded

Check-in changes held to released. A cancellation changes it to refunded and opens the room.

- **A real payment gateway** can be a later phase.
- **This version only stores the status.**

↳ *a state, not a charge*

CHECK-IN

Held becomes released

The student checks in. The deposit record leaves held.

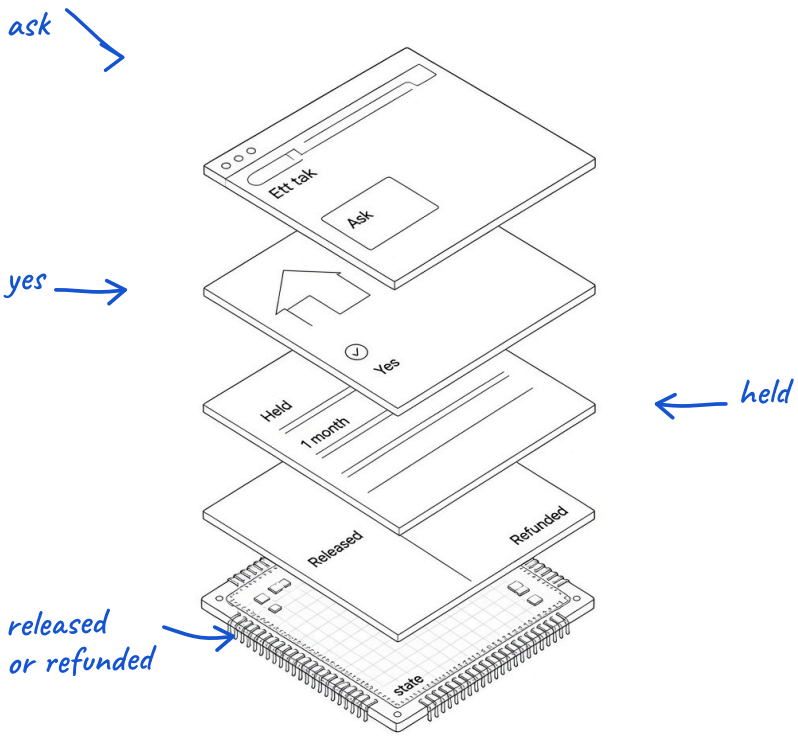
↳ *released*

CANCEL

Held becomes refunded

The booking is cancelled. The record leaves held, and the room opens again.

↳ *refunded*



Flatmate fit.

Better compatibility before a shared home. Sleep, noise, smoking and shared interests become a number the student sees first. It is 10 of the match score.

01 · THE CLASH

The listing never shows it

Two people can share a room and still fight. Rent and photos do not say who stays up, who wants quiet, or who smokes. They find that out after move-in.

- **Sleep.** Early bird against night owl.
- **Noise.** Quiet against social.
- **Smoking.** Smoker against non-smoker.

↳ *found too late*

02 · ON THE CARD

A number before they share

Flatmate fit is a number from 0 to 100. The student sees it on the card, with the reason it moved, before anyone moves in.

- **10 of the match score.** It does not decide the room alone.
- **The reason is written down.** Not a hidden rank.
- **No paid ranking.** Money does not move this number.

↳ *seen before they share*

03 · THE RULE

Fifty, then the tags

It starts at 50. A tag raises it only when both sides chose it. Each clash takes 25 off. The result stays inside 0 and 100.

- **Nothing under 0.** Three clashes can reach zero.
- **Nothing over 100.** Matching tags stop there.
- **One side is not enough.** A tag counts only when both chose it.

↳ *50, then up, then 25 off*

04 · ONE CASE

Quiet, then a sleep clash

Both mark quiet, so the number rises from 50. One is an early bird. The other is a night owl. That is one clash.

- **Minus 25** for the sleep clash.
- **Another 25** if they also clash on noise or smoking.
- **The card names the clash.** The student can see what moved the number.

↳ *the card shows why*

LEFT SIDE OF THE DRAWING

Early bird, quiet, non-smoker

One person. Sleeps early, wants a quiet flat, and does not smoke. None of these match the person on the right.

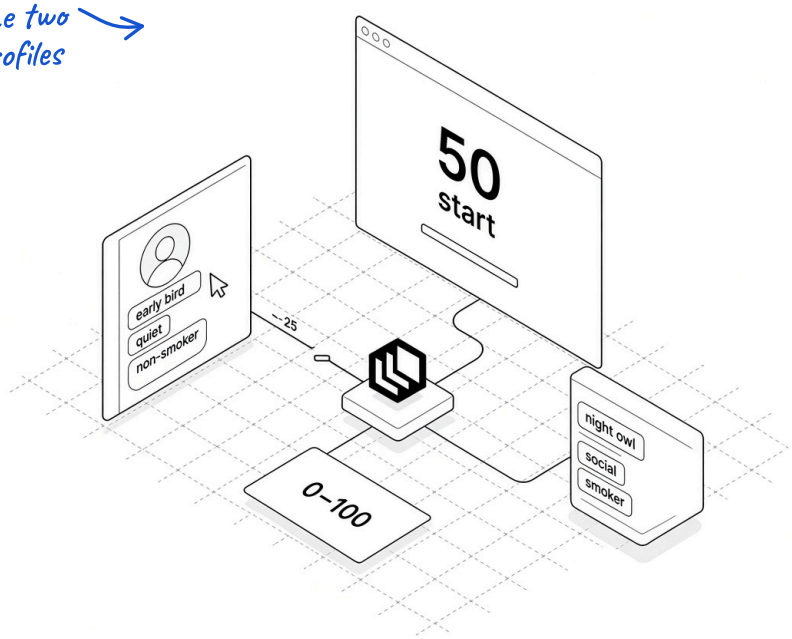
RIGHT SIDE OF THE DRAWING

Night owl, social, smoker

The other person. Stays up, wants company, and smokes. All three pairs clash. The window is the start, 50. The sheet in front keeps the result inside 0 to 100.

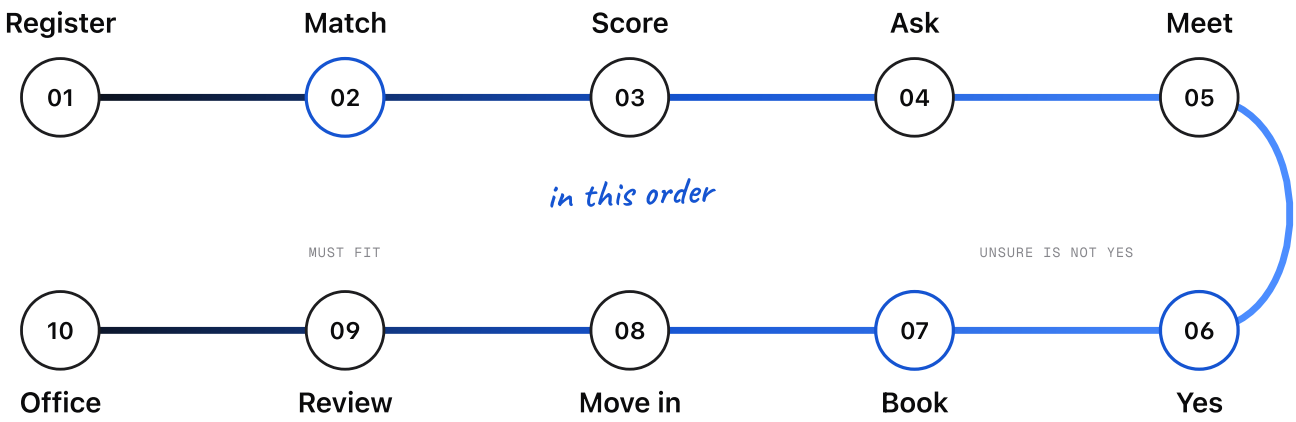
↳ *every pair takes 25 off*

the two profiles →



How a student moves.

From registration to moving in. Ten connected steps, in one place.



01 · ACCOUNT

Register and verify email

The student opens Ett tak, registers, and confirms the email.

02 · PROFILE

Programme, budget, dates

Housing type, interests and how they like to live.

03 · MATCHES

Recommended homes

Scores, reasons, and the homes that did not qualify.

04 · A PROPERTY

Photos, price, reviews

Facilities, dates, the verification mark and resident reviews.

05 · INTEREST

Ask, with a message

The request goes to the provider. A message is optional.

06 · APPROVAL

Yes, or no

The provider reviews the request and accepts or declines it.

↳ *pending is not a yes*

07 · FLATMATES

Meet when sharing

Compatibility, one to four topics, then yes, unsure or no.

08 · BOOK

Confirm when allowed

The booking opens only after the required conditions pass.

09 · CHECK IN

The status updates

After move-in, check-in changes the booking and the deposit record.

10 · REVIEW

Stars after check-in

A rating and a comment from the stay itself.

↳ *one journey, one place*

Technology used.

Built from scratch for performance, security and later growth. Next.js, then Node.js, then PostgreSQL. OpenRouter writes the listing draft from the server.

01 · THE WEBSITE

Next.js

The public site, the student application, the provider dashboard and the admin dashboard.

- **Responsive layouts.**
- **Pages that search engines can read.**

02 · THE SERVER

Node.js

Sign-in, permissions, listings, the match, interest, meetings, booking rules, reviews and the AI call.

- **API routes** on the Node.js runtime.
- **Rules run on the server,** not only in the browser.

03 · THE ROWS

PostgreSQL

Accounts, profiles, providers, listings, interest, meetings, bookings, deposit records and reviews.

- **Roles and relationships** stay in the database.
- **Access is limited** to the right role.

04 · THE DRAFT

OpenRouter

Providers turn property facts into a description. The request goes through the backend, so the key never reaches the browser.

- **About 60 to 110 words.**
- **Facts only.** The provider edits and approves.

↳ *the provider owns the words*

05 · THE FAST READS

Redis

The hot reads sit in Redis, so a page does not ask PostgreSQL for the same thing on every visit.

- **The rows stay in PostgreSQL.** Redis is the fast copy.
- **Secrets stay on the server.** Redis is not the public page.

↳ *fast reads, real rows*

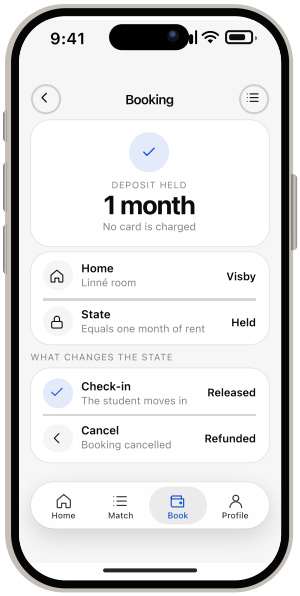
ALSO ON THE SITE

↳ *React, JavaScript, HTML, CSS, Figma, GitHub*

Student screens.

A simple experience in the browser, on a desktop, a tablet or a phone. Register, match, ask, meet, book, then review.

deposit held



BEFORE MOVE-IN

Register, match, then ask.

Login with email verification. A profile for programme, budget, dates and how they live. A dashboard of matches, requests, meetings and bookings.

- **Catalog filters** for city, type, budget and verified homes.
- **A property page** with photos, price, facilities and reviews.
- **My matches** show the score, the breakdown, and why a home was excluded.

↳ *no yes, no booking*

AFTER CHECK-IN

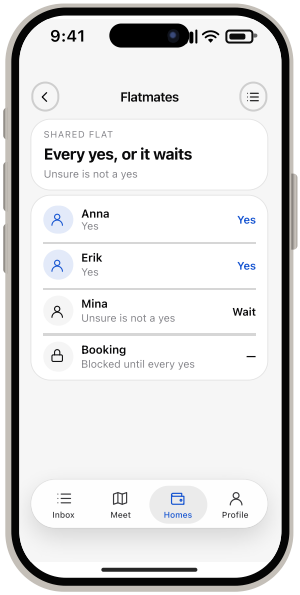
Interest, meetings, bookings, reviews.

Every request and its status. Compatibility, topics and yes, unsure or no. Bookings with the deposit record. Stars only after check-in.

- **My interests** and the provider's answer.
- **My bookings,** including held, released or refunded.
- **One to five stars** after check-in. The rating is 10 of the score.

↳ *the rating is 10 of the score*

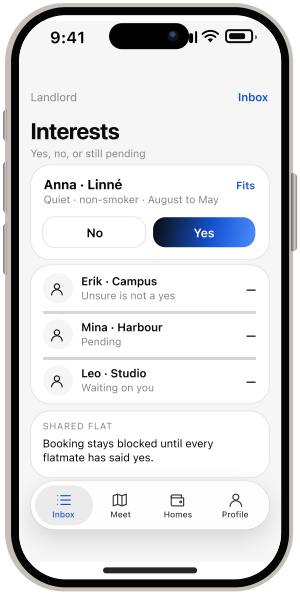
stars after check-in



Landlord and office.

One workspace for housing providers. Publish homes, answer students, and see whether an administrator has verified the listing.

yes or no



THE LANDLORD

Register, then wait for approval.

The organization registers and waits. The dashboard then shows homes, open rooms, pending and accepted requests, bookings and verification.

- **Create and edit a listing,** including photos, rent, rooms, dates and facilities.
- **Generate a description,** edit it, and approve it before publish.
- **Accept or decline** each student request.

↳ *still waiting is not a yes*

01 · LISTINGS

Rooms and dates

Availability, lease dates, campus distance and the facilities on each home.

02 · REQUESTS

Review the student

See the relevant profile, then accept or decline. Pending and declined both block booking.

03 · STATUS

Verified, or still waiting

Providers see bookings and whether an administrator has verified the property.

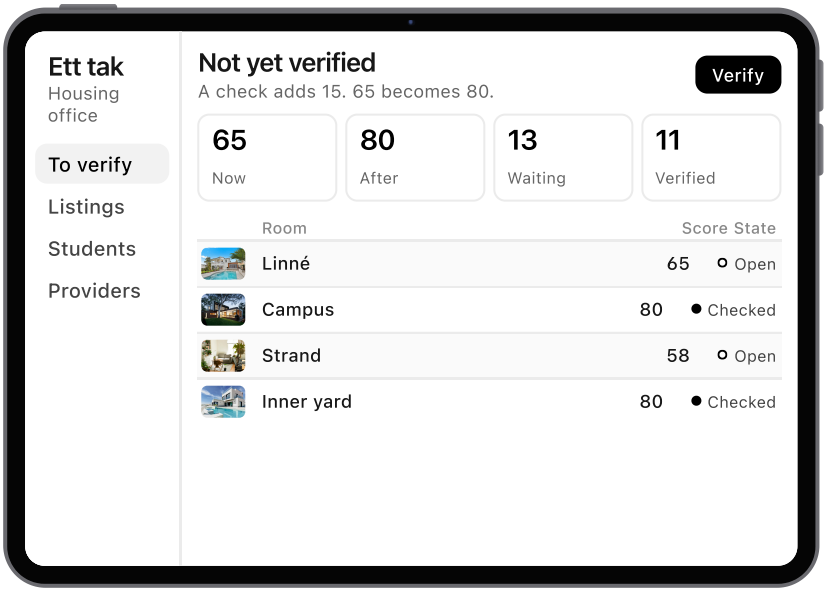
THE OFFICE

One view for the housing office.

The municipal team can see many properties, student activity and provider organizations, and keep verification in one place.

- **Less manual coordination.**
- **A verified home scores higher.** Document checks are a later phase.

↳ *better visibility*



not yet verified

Admin.

Complete control for the housing company. Students, providers, properties and who is allowed to operate.

01
Overview
Students, providers, homes, verified homes, and what is still waiting.

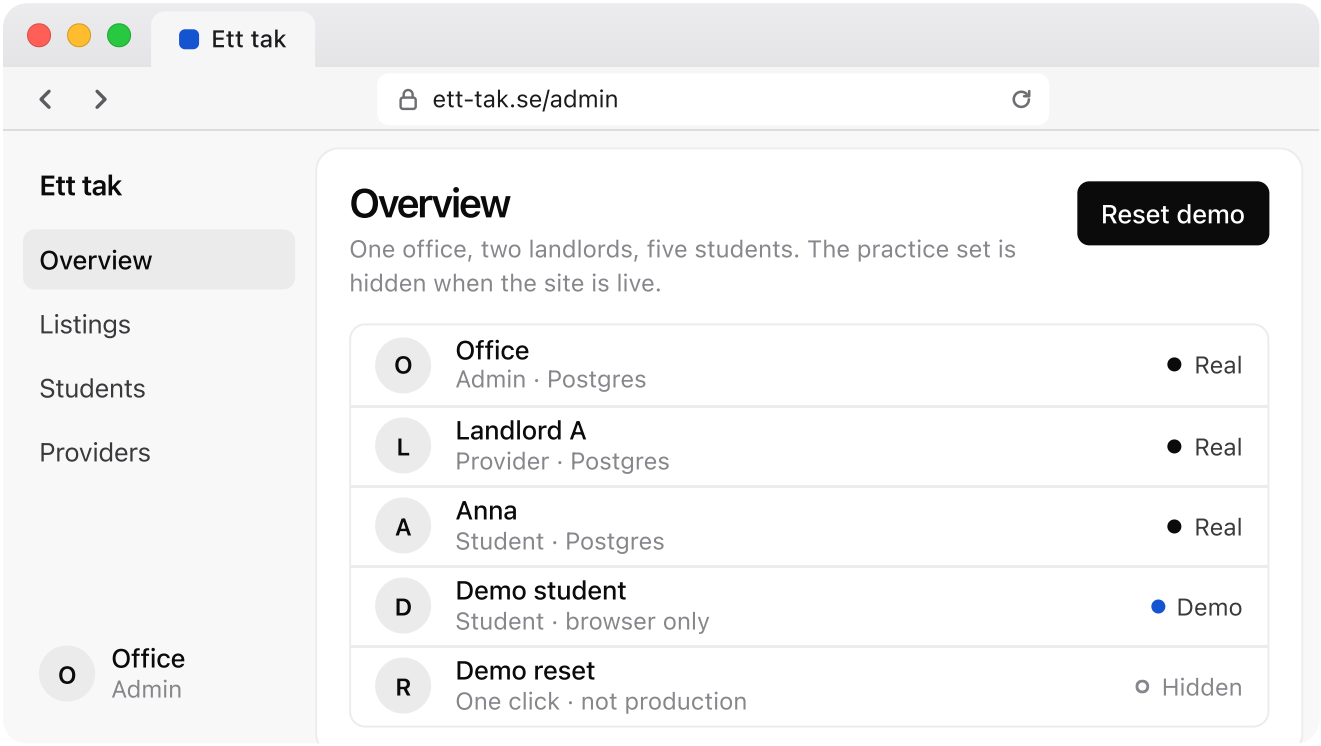
02
Properties
Unverified listings first. Verify one, or remove that mark.

03
Students
City, dates, budget, housing preference, interests and languages.

04
Providers
Homes, verified count, open requests and average rating.

THE OFFICE SCREEN

↳ *one click resets the practice set*



05 · APPROVALS
Pending organizations
New providers wait in their own list. An administrator approves or rejects them. Provider tools stay closed until then.

06 · THE SERVER
Roles are checked there
A person cannot grant themselves administrator or provider access by editing the browser.

VERIFIED HOMES
Extra points in the match
A verified property scores the verification points. Removing the mark takes them away.

↳ *trust, written down*

THE PRACTICE SET
Hidden when live
One administrator, two providers and five students, for testing. Not a way into the live site.

↳ *not a finance system*

Project timeline.

Waterfall. One phase is accepted before the next begins. About 7 to 8 weeks, if feedback and access arrive on time.

WATERFALL · ONE PHASE, THEN THE NEXT

Requirements, then design, then the build, then testing, then deployment, then maintenance. Nothing in a later phase starts until the phase before it is accepted.

↳ *7 to 8 weeks*

01

Requirements

We gather the customer and business needs and write them into a Software Requirements Specification before any design starts.

↳ *the SRS*

02

System design

The accepted requirements become the architecture, the database schema, and the interface layouts.

03

Implementation

We write the code and build the modules from that design: the landing website, the marketplace, and the admin ERP.

↳ *then testing*

04

Testing

We validate the software, and fix bugs, integration issues, and anything that misses the requirements.

05

Deployment

The finished product goes to the production environment, with the source code and the handover notes.

06

Maintenance

After handover, bug fixes on the agreed work are covered for 3 months, free. New features are separate.

↳ *3 months free*

What's not included.

Clear scope. The first version is the housing platform and its core workflows. Anything here can be a later phase.

01

Native apps

No dedicated Android or iOS app. The site works in a mobile browser.

- **Responsive web** is in this build.
- **App stores** are a later phase.

↳ *not this build*

02

Real payments

No gateway, no collection, no fund transfer, no refund of money, and no escrow.

- **Deposit status only.**
- **A gateway** can be a later phase.

↳ *you arrange these*

03

Sign-on, video, calendars

No university single sign-on. Meetings are proposals and answers, not a video call.

- **No Google or Outlook calendar.**
- **Students use Ett tak login.**

04

Documents and analytics

No document upload workflow. Provider approval and property verification stay in the admin dashboard.

- **No occupancy forecast.**
- **No business-intelligence dashboard.**

05

Bills you pay

Domain, hosting, email delivery, OpenRouter usage, and paid maps or other external APIs.

- **Not inside AED 20,500.**
- **Swedish and English.** The translation is generated with AI.

↳ *housing admin only*

06

Later, if you ask

Anything beyond the agreed scope is estimated and approved before it is built.

- **3 months of free AMC** covers bug fixes on the agreed work, from handover.

↳ *added later, if you ask*

THE BOUNDARY

None of these bills sit inside the fee.

The first version is the platform and its core workflows. Extra features are a separate estimate.

↳ *outside this proposal*

Project investment.

Complete platform development. One fixed investment of AED 20,500, covering planning, the build, the database, OpenRouter, testing and the first deployment.

THE FEE

20,500 AED

One fixed fee for the landing website, the housing marketplace, and the admin ERP. Testing, deployment and handover stay inside it.

↳ *fixed for this scope*

50% TO START

10,250 AED

Before the project starts. An invoice is issued for this milestone.

50% WHEN IT IS DONE

10,250 AED

When development is complete, before the source code is handed over.

↳ *then the source code*

INSIDE THE FEE

The three deliverables

- **Landing website,** marketplace web app, and admin ERP.
- **Matching, meetings, booking** and the listing draft.
- **Testing, deployment and handover.**
- **3 months of free AMC** from handover, on the agreed work.

NOT INSIDE THE FEE

Bills you arrange

- **Hosting, the domain and email.**
- **OpenRouter credits.**
- **Branding and sample property data.** Translation is generated with AI.

Third-party subscriptions, hosting and usage charges sit outside the AED 20,500.

↳ *campaignmanagement@clickcatalyst.me*

50%

AED 10,250

Before the project starts.

50%

AED 10,250

When development is complete, before the source code.

INCLUDED

3 months free AMC

Bug fixes on the agreed work, from handover. New features are separate.

↳ *from handover*

Terms & Conditions.

These terms govern the Ett tak web application. Approving the proposal means the client agrees to them. The proposal and these pages are the agreement.

01

Scope and agreement

The platform is designed and built from scratch, as described in this proposal. Anything not written here is additional work.

- **The public website,** student application, provider dashboard, and admin dashboard.
- **The backend,** the PostgreSQL database, and the OpenRouter listing draft.

↳ *from scratch*

02

Investment and payment

The development investment is AED 20,500. An invoice is issued for each milestone. A late payment pauses the work, and the delay is added to the timeline.

- **AED 10,250, 50%,** before the project starts.
- **AED 10,250, 50%,** when development is complete, before the source code.

↳ *work starts after the first payment*

03

Timeline and delivery

About 7 to 8 weeks from the day work officially starts. The estimate assumes the scope stays as approved and feedback arrives on time.

- **Late feedback, missing information, a late payment, or a third-party outage** can move the delivery date.
- **A significant scope change** needs a revised schedule.

↳ *7 to 8 weeks*

04

What you provide

Logo, approved website content, sample listings, campus information, the matching rules, domain and hosting access, OpenRouter credits, and email credentials where they are needed.

- **Swedish and English** are generated with AI. You review them in the product.
- **You confirm** you may use the materials you send. A delay moves the schedule.

↳ *you review the translation*

05

Scope changes

The fee covers only what this proposal describes. New features, integrations, and major workflow changes are additional work.

- **Cost and time** are stated before that work starts.
- **It begins only after you approve it.** A change to approved behaviour is not a bug fix.

↳ *approved first*

06

Design and revisions

The interface follows the agreed requirements. You review it and send feedback in one pass, within a reasonable time.

- **Corrections inside the approved scope** are included.
- **A redesign, or new pages after approval,** need more time and a separate cost.

↳ *the latest approved design*

THE AGREEMENT

The approved proposal and these terms are the project agreement.

Taxes, bank charges, and transfer fees are handled as both sides agree. They are not automatically inside the AED 20,500. Testing, third-party bills, and the source code are on the next page.

↳ *written, then built*

Terms & Conditions, continued.

Testing, third-party services, the deposit record, security, ownership of the code, and 3 months of free support.

07

Testing and acceptance

The agreed journeys are tested before delivery: accounts and roles, listings and verification, the score, interest, flatmate answers, booking, reviews, the AI draft, and admin actions.

- **Send one set of notes** within five business days of a milestone or the final delivery.
- **Issues in the agreed work** are corrected. Anything outside it is estimated separately.

↳ *five business days*

08

Third-party services

Hosting, the domain, email, OpenRouter, and other APIs are not inside the AED 20,500. You keep those subscriptions and credits.

- **Outages, price changes, and API limits** belong to those providers.
- **Extra work caused by a major change** at a provider is approved separately.

↳ *your accounts*

09

Deposit status

The first version records a deposit equal to one month of rent, shown as held, released, or refunded. It does not move money.

- **No payment gateway,** no collection, no escrow, and no automated refund.
- **A real payment integration** is a later phase, approved separately.

↳ *a record, not a charge*

10

Security and privacy

Sign-in, roles, and checks run on the server. API keys are not placed in the public pages. You own the privacy notice, the user terms, and how personal data is used.

- **Credentials are used only** for this project, and handled with care.
- **No system is free of risk.** Issues found in the agreed scope are fixed inside the support window.

↳ *secrets stay on the server*

11

Source code

After the full AED 20,500 is paid, the custom Ett tak code and the project notes transfer to you. Until then, the unpaid work stays with the developer.

- **General methods and reusable code** that are not specific to Ett tak stay with Click Catalyst.
- **Libraries and services** keep their own licenses. You may later appoint another developer.

↳ *after full payment*

12

3 months of free AMC

From handover, bug fixes are included for 3 months where the delivered work does not match the approved requirements. Errors, broken agreed flows, and wrong business rules are in. New features, redesigns, new integrations, and third-party outages are not.

- **Unauthorized code changes** are outside this window.
- **Anything else** is quoted before it is built.

↳ *3 months from handover*

HANDOVER

The source code is handed over when the agreed work is complete and the full fee is paid.

Cancellation, confidentiality, and the limits of this agreement are on the next page.

↳ *full payment, then the code*

Terms & Conditions, further.

Cancellation, confidentiality, the limits of the work, the law, and how the agreement is accepted.

13

Cancellation

Either side cancels or pauses in writing. If you cancel after work has started, completed work, approved milestones, and costs that cannot be undone are reviewed.

- **You pay for the work done** up to that date.
- **A pause for missing information or a late payment** revises the schedule. Restarting depends on who is free.

↳ *in writing*

14

Confidentiality

Business information, technical notes, credentials, and project documents stay between the two sides. They are not shared without permission, except where the law requires it.

- **Access details** are used only for this project.
- **This duty continues** after the project ends.

↳ *between us*

15

Warranty and limits

The work follows the approved requirements and the agreed stack. Hosting, third-party APIs, and AI models are not guaranteed to stay up.

- **The AI draft is assistance.** The provider approves the listing before it is published.
- **The score follows the approved rules.** It does not promise a tenancy or a flatmate match.

↳ *reasonable care*

16

Law and housing rules

The platform is built to the approved requirements. You are responsible for housing operations, rental arrangements, user terms, and financial processes under the law that applies to you.

- **Legal review of leases, escrow, and privacy documents** is not in the fee.
- **A legal change outside the scope** is quoted separately.

↳ *not legal advice*

17

Acceptance

Approving the proposal and paying the first milestone accepts the scope, the AED 20,500, the payment schedule, the 7 to 8 weeks, and these terms.

- **A change to the agreement** is written and approved by both sides.
- **A dispute is discussed first.** Governing law is agreed in writing before a final contract is signed.

↳ *in good faith*

SUMMARY

Ett tak, from scratch

Next.js, Node.js, PostgreSQL, and OpenRouter. AED 20,500. AED 10,250, then AED 10,250. About 7 to 8 weeks. 3 months of free AMC. Source code after the full payment.

- **Delays beyond either side's control,** including a major outage or a government restriction, are not a breach.
- **campaignmanagement@clickcatalyst.me**

↳ *one agreement*

APPROVAL

Approving this proposal accepts the scope, the fee, the weeks, and these terms.

Ett tak. A smarter, simpler, and more connected housing experience. Questions go to campaignmanagement@clickcatalyst.me.

↳ *under one roof*
